

3PC / FedCM

TAG Questions

- FedCM could take away one of the reasons to have 3pc; is it enough?
 - <https://github.com/fedidcg/use-case-library/wiki/Primitives-by-Use-Case>
- Does the TAG have any further work to do wrt 3pc?
- Do we want to talk more specifically about FedCM?

Background

- Apple's timeline: they started blocking third-party cookies in 2017 as part of Intelligent Tracking Protection
- Mozilla's timeline: they turned on Total Cookie Protection by default in June 2022
- Google pivoted to more informed choice and NOT full deprecation of 3pc in July 2024
 - <https://ico.org.uk/about-the-ico/media-centre/news-and-blogs/2024/07/ico-statement-in-response-to-google-announcing-it-will-no-longer-block-third-party-cookies/>

FedCM

- FedCM (including various name changes) has been under development since 2021, first with a CG and then within a joint CG/WG effort
- Apple's position has always been non-blocking
 - [How To](#) (thank you, Marcos and Gemini)
- Mozilla's position was engaged but then withdrew their developer in 2025
 - https://developer.mozilla.org/en-US/docs/Web/Security/Authentication/Federated_identity#third-party_cookies
- Google continues to work on this as broadly useful for identity on the web

Many moving parts

IdP Registration (Stage 1)

Multi-IdP API (stage 2)

Metrics API (maybe ready for Stage 2)

Delegation-oriented FedCM (Stage 1)

IdP-Initiated (Stage 1)

login-element (Stage 1)

Native-app-IdPs (Stage 1)

Lightweight FedCM (Stage 1)

Login Status (Stage 1?)

Add Account API (now merged as part of FedCM)

Error API (now merged as part of FedCM)

Active Mode API (now merged as part of FedCM)

Multiple configURLs (now merged as part of FedCM)

Account Labels API (now merged as part of FedCM)

Continuation API (now merged as part of FedCM)

Params API (now merged as part of FedCM)

Fields API (now merged as part of FedCM)

Current Activity with FedCM Adopters

- Shopify, others
- AT Protocol peeps (<https://atproto.com/>,
<https://docs.bsky.app/docs/advanced-guides/atproto>)
